ABSTRACT OF THE DISCLOSURE

There are disclosed a mobile communication apparatus and an information providing system using the mobile communication apparatus in which a user of the mobile communication apparatus can obtain information output of desired contents at a desired time without carrying other devices. In this system, the side of the mobile communication apparatus requests a predetermined opposite party of communication to transmit desired information such as music data by using a transmitter. When a receiver receives information transmitted in response to the request, the received information is stored in a memory, and at an arbitrary time thereafter, the information in the memory is read by a recording/reproducing section, and is outputted and reproduced to the user from an input/output section.
